How to Use the `imeko_acta` LaTeX class

Federico Tramarin[1]

[1] *University of Modena and Reggio Emilia, Italy*

ABSTRACT

This article describes how to use the imeko_acta.cls class LATEX to produce high quality typeset papers that are suitable for submission to the Acta IMEKO journal.

The editorial team of Acta IMEKO strongly encourages authors to use this LATEX 2$_\varepsilon$ template file to produce their manuscript. Please refer to the author for any suggestion, bug filing and complaint.

1. THE TITLE PAGE

The title page is created with the standard LATEX command `\maketitle`. Before this command is called, the author must declare all of the text objects which are to appear in the title area.

Example unit μm · kg/μs.

1.1. Paper Title

Use the classic `title` command. It is safe to put it just after the `\begin{document}` line.

1.2. Authors

Description of authors' management.

1.3. Sections

If a section is long or deals with different topics, make a subdivision in subsections. Avoid further subdivision of a subsection.

When subsections are used, there must be at least two. Use the style named "Level2Title" for the header of a subsection.

1.3.1. Test

If a section is long or deals with different topics, make a subdivision in subsections. Avoid further subdivision of a subsection. When subsections are used, there must be at least two. Use the style named "Level2Title" for the header of a subsection.

1.4. Numbering of subsections

Subsection numbering follows the outline numbering format which is configured in the template. Subsection headings use the Calibri font and are in bold.

ACKNOWLEDGMENT

Here persons or institutes may be acknowledged for their technical, scientific or financial support. List them in this section, and not as a footnote or otherwise.
